DAIRYFINE-DHA (OMEGA-3)

Dairyfine-DHA Omega-3 Fatty acids are crucial in all aspects of nutrition. Supplementation of fatty acids can affect the cellular function, reproduction and health of the animal. The most important causes of reproductive failure are negative energy balance in early lactation, poor detection of estruses, failure to produce high-quality oocytes and lack of sufficient progesterone production after fertilization.

Dairyfine-DHA Omega-3 Benefits

Rumen-protected Omega-3 fatty acid supplement prior to breeding was found to be beneficial for reproductive performance in dairy cows when problems exist. Such a supplement can improve the percentage of cattle bred that become pregnant in herds where this metric is low. Early-term abortions can be lowered particularly in herds where this might be a problematic occurrence.

ADVANTAGES OF DAIRYFINE-DHA (OMEGA-3)

- ◆ Dairyfine-DHA can be used into animal or pets feed to increase overall nutrition content.
- ◆ Improve cattle's and piglets survival rate and DHA content. Make body smooth and strong.
- ◆ Increase neuronal dendrites number which improve nerve conduction efficiency.
- ◆ Enhance immune system ability and anti-virus capability. Lowering triglycerides and cholesterol.

Storage: Store in cool and dry place.
